

windows installation kafka these are primary steps to install

step 1: start the zookeeper go to bin/windows because we are installing in windows so we have install bat files

C:\kafka\bin\windows\zookeeper-server-start.bat C:\kafka\config\zookeeper.properties

step 2:start the server go to bin/windows

C:\kafka\bin\windows\kafka-server-start.bat C:\kafka\config\server.properties

step 3: create a topic go to bin/windows

kafka-topics.bat --create --topic quickstart-events --bootstrap-server localhost:9092

step 4: create a procedure go to bin/windows and type anything and check in consumer

kafka-console-producer.bat --topic quickstart-events --bootstrap-server localhost:9092

step 5 : create a consumer go to bin/windows and get the output from procedure

kafka-console-consumer.bat --topic quickstart-events --from-beginning --bootstrap-server localhost:9092

if this installation doesnt work go to config and their start the process

step 1:\bin\windows\zookeeper-server-start.bat .\config\zookeeper.properties

step 2:.\bin\windows\kafka-server-start.bat .\config\server.properties

step 3 : create a topic from apache kafka

step 4: create a procedure

step 5:create a consumer
